

Project Report (Phase-I)

Software Engineering Lab | Spring 2026

Project Title: University Management System

Submitted By:

Name: MD HASAN SOJIB

ID: 2233081419

Batch: 60

Section: H

Submission Date: 27-04-2026

Project Overview

We have built a project called the University Management System. In this system, there are three different roles exist,

1. Admin
2. Student
3. Teacher

Admin can create another admin, student and teacher and store their details. Also in this system there will be department, course, specific student's enrollment in a specific course, specific student's result in a specific course details.

List of features

1. Admin creation and List admins
2. Student creation and List students
3. Teacher creation and List Teachers
4. Department creation and List departments
5. Course creation and List courses
6. Enrollment creation and List enrollments
7. Result creation and List results

Novelty

This system is built totally free and can be used from anywhere in the world through internet.

Team Members

This project is done by the following team members:

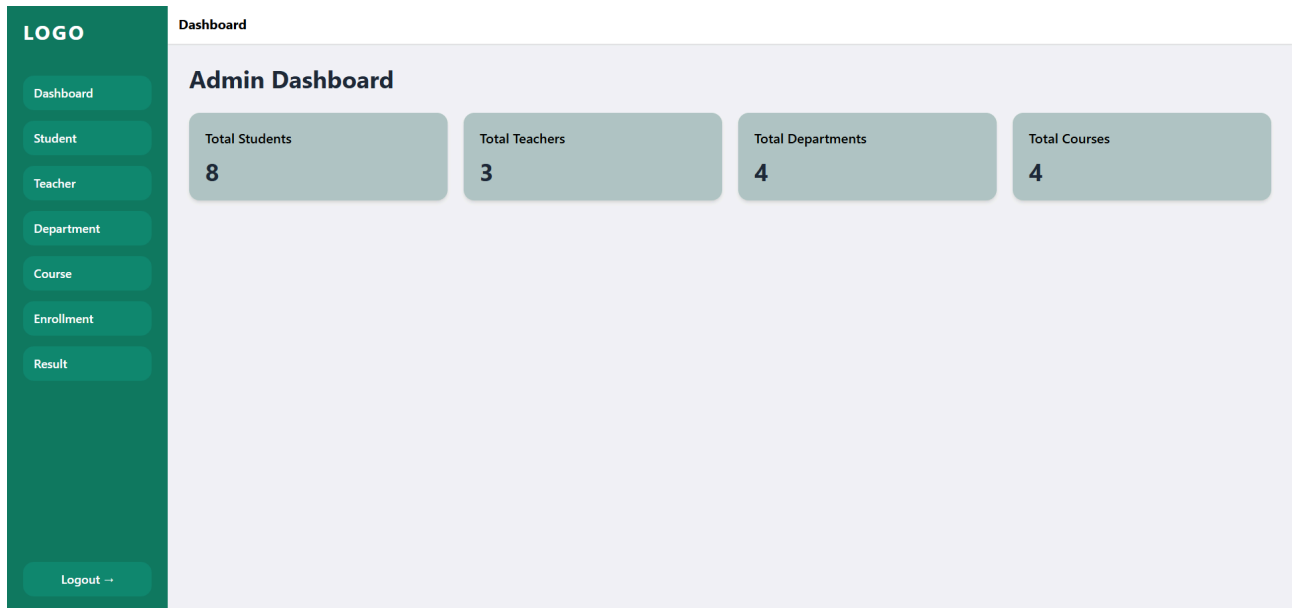

<u>Name</u>	<u>ID</u>
MD HASAN SOJIB	2233081419
Mariam Min	2233081428
Nusrat Jahan Retu	2233081402
Md Sobuj	2233081448
Liptan Adhikari	2233081443

Individual Contribution

I have added feature like admin creation and List admin, Student creation and list students. Also created admin dashboard.

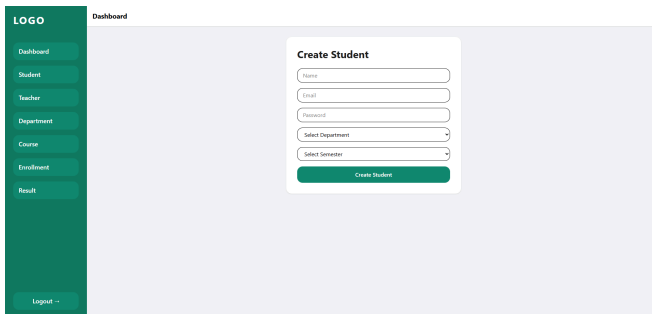

Figma Design

This is the admin dashboard figma design.

Front End

Here is the student creation page. Using the student creation page you can create student.

Backend

Here are the student controller where student can be created, get all students and get a specific student by id using these functions.

```

1  import { Request, Response } from "express";
2  import studentService from "../services/student.service";
3
4  ✓ const registerStudent = async (req: Request, res: Response) => {
5      const result = await studentService.createStudent(req.body);
6
7      res.status(201).json({
8          success: true,
9          message: "Student created successfully",
10         data: result,
11     });
12 };
13
14 ✓ const getAllStudents = async (req: Request, res: Response) => {
15     const result = await studentService.getAllStudents();
16
17     res.status(200).json({
18         success: true,
19         message: "Students retrieved successfully",
20         data: result,
21     });
22 };
23
24 ✓ const getStudentById = async (req: Request, res: Response) => {
25     const id = Number(req.params.id);
26
27     const result = await studentService.getStudentById(id);
28
29     res.status(200).json({
30         success: true,
31         message: "Student retrieved successfully",
32         data: result,
33     });
34 };
35
36 export default {
37     registerStudent,
38     getAllStudents,
39     getStudentById,
40 };

```

Database

I have created an admin and student table in the database where there will be store admin and student details.

I am MD HASAN SOJIB, I am stating that in the Individual contribution section I only added the thing that is truly done by me, and I also did not used any AI tool(s) to write this report.
